POSITION

Move your aircraft on an approach, to a runway takeoff point, on a helipad, a gate or parking position or any other custom geographical location you choose.

Airport Selection

There are two options to select an airport.

Directly by ICAO Code

Just enter the ICAO code of the airport in the corresponding field and the airport will load immediately.

Alternatively you can also use the button Random to choose a random airport.

Search for Airport

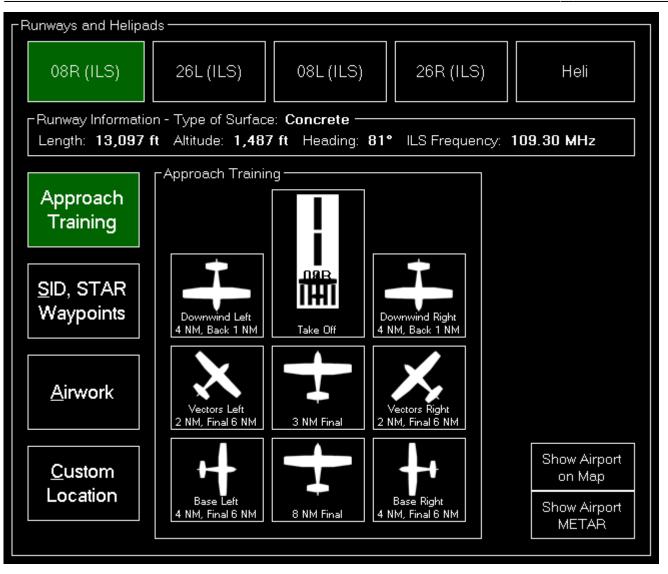

Click on this button to open the **Select Airport** dialog.

Airport Information

Here you can see the name, country as well as city of the currently selected airport.

Runways or Helipads

Now you can choose on which runway or helipad you want your aircraft to be place.

10 Note: This selection can also be directly accessed by the keyboard shortcut N.

Runway/Helipad Information

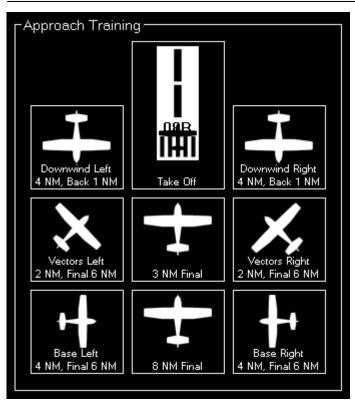

After selecting a runway some additional information about this runway is displayed.

For helipads this information is not displayed before you choose a specific helipad in the next step.

Approach Training

10 Note: This option is only available if you chose a runway.

To start an approach training just click on one of the button to place your aircraft it the corresponding position.

If the runway is ILS enabled the correct altitude above ground will be calculated using the runwayspecific glideslope degree. Otherwise the default of 3° will be used.

All parameters like distance to landing point for the two final positions, distance for the base positions or altitude above ground for the downwind positions can be configured in the **Settings** module. There is also an additional option to enable a confirmation dialog in in the **Settings** module that allows to adjust these parameters dynamically.

Helipads

10 Note: This option is only available if you chose Heli.

Click on one of the helipad buttons to place the aircraft on a helipad.

SID and STAR Waypoints

-SID and STAR Waypoints –

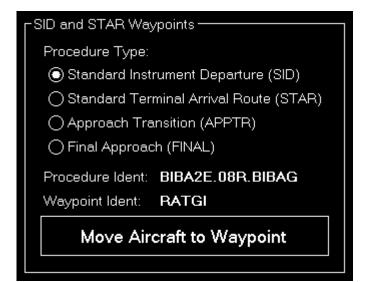

- Procedure Type:
- Standard Instrument Departure (SID)
- Standard Terminal Arrival Route (STAR)
- O Approach Transition (APPTR)
- ◯ Final Approach (FINAL)

Procedure Ident:

ALG2E.08R.ALG	^	
ANKE9E.08R.ANKER		
BIBA2E.08R.BIBAG	Ξ	
EVIV3E.08R.EVIVA		
GIVM5E.08R.GIVMI		
INPU2E.08R.INPUD		
KIRD2E.08R.KIRDI		
MERS1P.08R.MERSI	*	

You can place your aircraft directly on a waypoint of a Standard Instrument Departure (SID) or Standard Terminal Arrival Route (STAR).

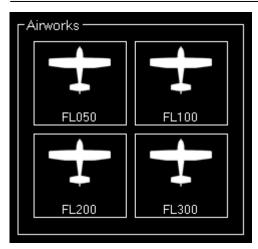

First select which the desired procedure type - SID oder STAR - and then the procedure ident. Finally you can select one waypoint of the procedure you have chosen.

Now click on the button Move Aircraft to Waypoint to change the aircraft position accordingly.

Note: The aircraft will be automatically set in a way that the heading matches the direction to the next waypoint in the procedure.

Airworks

Choose one of four pre-defined flight levels to start your airworks.

Of course, also these altitudes can be easily changed in the **Settings** module.

Custom Location

Г ^{Cust}	tom Location –								
Alt	Altitude: Heading:								
500	5000 ft 220								
•	-From Runway	Landir	ng Po	int —					
	Angle:	60		•					
	Distance: 3 NM								
	-At Coordinate	s							
	Latitude:	48	N T	21	' 13.62]"			
	Longitude:	11	E	47	9.91]"			
	Set Custom Location								

If you want your aircraft to be place at a completely custom location, this is the right section for you.

First enter the desired altitude (above MSL) and heading of the aircraft. Then you can choose from two options to define the position.

From Runway Landing Point

From Runway Landing Point						
Angle:	60	°				
Distance:	30	NM				

FS-FlightControl Manual: https://www.fs-flightcontrol.com/en/manual/

Using this option the aircraft will be move a definable distance away from the runway landing point in the entered direction.

At Coordinate

Latitude: 48 N - 21 ' 13.62 " Longitude: 11 E - 47 ' 9.91 "	CAt Coordinates							
Longitude: 11 E - 47 ' 9.91 "	Latitude:	48	Ν	٠	21	ı	13.62	"
	Longitude:	11	Е	•	47	'	9.91	"

Or you can just enter the exact geographic coordinates manually where you want the aircraft to be place.

The fields are pre-filled with the coordinates of the currently loaded airport.

Action Buttons

Show Airport on Map	
Show Airport METAR	

Use the button Show Airport on Map to switch to the **Map** module and center the map on the current airport and the button Show Airport METAR to show the current **Real-Time Weather Information** for this airport.

Gate or Parking

-Gate or Parking	٦
Туре:	
Fuel	
Gate Heavy	
Gate Medium	
Gate Small	
Ramp Cargo	
Ramp General Aviation Large	
Ramp General Aviation Medium	
Ramp General Aviation Small	

You can also place your aircraft on a gate or parking position.

Therefore first select the type and then a specific gate or parking.

Gate or Parking -	
Туре:	Gate Medium
Gate or Parking:	Gate 102
Move Aircr	aft to Gate or Parking

And then click on the button Move Aircraft to Gate or Parking to finally place the aircraft.

Options

Г	-Options						
	IAS:	150	kt	🗹 Set Gear: [🖌 Down	🗌 Override Altitude:	Set: 🗹 HDG 🗹 CRS
	Pitch:	0	•	🗸 Set Flaps: 🛛	0° -	0 ft MSL	ILS Frequency
L							

Here you can find several options like speed and gear/flaps status that are used when placing the aircraft.

All options are saved upon change and can even be defined on a per-aircraft level when aircraft profiles are enabled in the **Settings** module.

Note: When aircraft is placed on ground gear is always extended and ILS frequency can only be set obviously if the runway is ILS enabled.

Flight Situation Presets

Here you can save the current flight situation including aircraft position, altitude, speed, heading as well as pitch and bank angle.

If there are more than 6 presets, you can page through them using the buttons Back and Next.

After clicking on the button Add to create a new situation preset or click on an existent one to send it to the flight simulator.

To reset the simulator you can use the button Reset Current Flight Situation.

Mote: For X-Plane this is only available starting from X-Plane version 11.10.

Create New Flight Situation Preset

FS-FlightControl: Create New Flight Situation Preset							
Please enter a name for the new flight situation preset:							
ОК	Ca	ncel					

When creating a new flight situation preset, you need to enter a name for it in this dialog.

Pop-Up Menu

If you right click (long "touch") on a flight situation preset this pop-up menu will be shown enabling you to rename or delete an existent flight situation preset again.

Rename Flight Situation Preset

FS-FlightControl: Rename Flight Situation Preset 💦 🗙								
Please enter a new name for the flight situation preset:								
Approach	EDDM 51	MM						
OK Cancel								

Here you can set a new name for an existent flight situation preset.

Position Aircraft

FS-FlightControl: Position Aircraft	?	×
Approach Training: EDDM, 08R, Vectors Left		
6 NM		
2 NM		
Coptions		
IAS: 150 kt Set Gear: Down Override Altitude: Set: V HDG V C Pitch: 0 ° Set Flaps: 0 V ft MSL V ILS Frequer		
Position Aircraft Cancel		

If you have enabled the corresponding option in the **Settings** this confirmation dialog will be shown before the aircraft position is actually changed.

This allows you to change certain re-position parameters on-the-fly for each positioning.
