# Command Line Parameters

You can use these command line parameters to enable or also to disable certain functions of FS-FlightControl.

Currently there is only one command line parameter available:

- `/doNotSaveSettings`<sup>1)</sup>: If used settings can be changed by the user, but changes will be discarded on program close.

 Note: All command line parameters are case insensitive.

<sup>1)</sup> This command line parameter only works with the commercial license of FS-FlightControl.
